Aim:

Write a C program to implement **Travelling Sales Person** problem using **Dynamic programming**.

Source Code:

TSP.c

```
#include<stdio.h>
int ary[10][10], completed[10], n, cost = 0;
void takeInput()
{
   int i, j;
   printf("Number of villages: ");
   scanf("%d", & n);
   for (i = 0; i < n; i++)
   {
      for (j = 0; j < n; j++)
      scanf("%d", & ary[i][j]);
      completed[i] = 0;
   }
   printf("The cost list is:");
   for (i = 0; i < n; i++)
   {
      printf("\n");
      for (j = 0; j < n; j++)
      printf("\t%d", ary[i][j]);
   }
}
void mincost(int city)
{
   int i, ncity;
   completed[city] = 1;
   printf("%d-->", city + 1);
   ncity = least(city);
   if (ncity == 999)
   {
      ncity = 0;
      printf("%d", ncity + 1);
      cost += ary[city][ncity];
      return;
   }
   mincost(ncity);
}
int least(int c)
{
   int i, nc = 999;
   int min = 999, kmin;
   for (i = 0; i < n; i++)
   {
      if ((ary[c][i] != 0) && (completed[i] == 0))
      if (ary[c][i] + ary[i][c] < min)
      {
         min = ary[i][0] + ary[c][i];
```

```
            kmin = ary[c][i];
            nc = i;
        }
    }
    if (min != 999)
    cost += kmin;
    return nc;
}
int main()
{
    takeInput();
    printf("\nThe Path is:\n");
    mincost(0);
    printf("\nMinimum cost is %d", cost);
    return 0;
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Number of villages: 3
0 10 15
10 0 35
15 35 0
The cost list is:
0 10 15
10 0 35
15 35 0
The Path is:
1-->2-->3-->1
Minimum cost is 60
